Code to make a bar graph with error:

```

1 %*****
2 %
3 % This is a simple extension of the bar plot to include error bars. It
4 % is called in exactly the same way as bar but with an extra input
5 % parameter "errors" passed first.
6 %
7 % Parameters:
8 % errors - the errors to be plotted (extra dimension used if assymetric)
9 % varargin - parameters as passed to conventional bar plot
10 % See bar and errorbar documentation for more details.
11 %
12 % Output:
13 % [hBar hErrorbar] = barwitherr(..) returns a vector of handles to the
14 % barseries (hBar) and error bar (hErrorbar) objects
15 %
16 % Symmetric Example:
17 % y = randn(3,4); % random y values (3 groups of 4 parameters)
18 % errY = 0.1.*y; % 10% error
19 % h = barwitherr(errY, y);% Plot with errorbars
20 %
21 % set(gca,'XTickLabel',{'Group A','Group B','Group C'})
22 % legend('Parameter 1','Parameter 2','Parameter 3','Parameter 4')
23 % ylabel('Y Value')
24 % set(h(1),'FaceColor','k');
25 %
26 %
27 % Asymmetric Example:
28 % y = randn(3,4); % random y values (3 groups of 4 parameters)
29 % errY = zeros(3,4,2);
30 % errY(:,:,1) = 0.1.*y; % 10% lower error
31 % errY(:,:,2) = 0.2.*y; % 20% upper error
32 % barwitherr(errY, y); % Plot with errorbars
33 %
34 % set(gca,'XTickLabel',{'Group A','Group B','Group C'})
35 % legend('Parameter 1','Parameter 2','Parameter 3','Parameter 4')
36 % ylabel('Y Value')
37 %
38 %
39 % Notes:
40 % Ideally used for group plots with non-overlapping bars because it
41 % will always plot in bar centre (so can look odd for over-lapping bars)
42 % and for stacked plots the errorbars will be at the original y value is
43 % not the stacked value so again odd appearance as is.
44 %
45 % The data may not be in ascending order. Only an issue if x-values are
46 % passed to the fn in which case their order must be determined to
47 % correctly position the errorbars.
48 %
49 %

```

```

50 % 24/02/2011 Martina F. Callaghan Created
51 % 12/08/2011 Martina F. Callaghan Updated for random x-values
52 % 24/10/2011 Martina F. Callaghan Updated for asymmetric errors
53 % 15/11/2011 Martina F. Callaghan Fixed bug for assymetric errors &
54 % vector plots
55 % 14/06/2013 Martina F. Callaghan Returning handle as recommended by
56 % Eric (see submission comments)
57 % 08/07/2013 Martina F. Callaghan Only return handle if requested.
58 % 18/07/2013 Martina F. Callaghan Bug fix for single group data that
59 % allows assymetric errors.
60 %
61 %
62 %
63 %
64 % 27/08/2013 Martina F. Callaghan Also removed dot from display as
65 % per Charles Colin comment. The
66 % handle can be returned to control
67 % 29/10/2014 Martina F. Callaghan appearance.
